

Medication Permission Form

If a child develops a very high fever of 39.5C (103F) or higher there is a possibility that he/she will have a seizure. The BLC director will make every effort to call a parent to pick up the child and seek medical attention. If the parent cannot be reached, an ambulance will be called. To reduce the chance of a seizure Tylenol will be administered to the child according to his/her weight.

Your signature below authorizes us to administer Tylenol to your child only if he/she develops a fever of 39.5C (103F) or higher.

Child's name: _____

Parent's signature: _____

Date: _____

Please note: As per our exclusion policy (Form 08), if your child has a fever above 37.8C (100F) we will contact you to pick them up and they will need to stay home 24 hours after the last sign of fever.
